A probable static test facility, which may be used for the testing of explosives or solid propellants, is identified on the southwest side of the city of Kamensk-Shakhtinskiy, USSR, at Chemical Combine 101. The facility is composed of a bunker and a firing bay (Figure 1). Horizontal test firings appear to be conducted, using the bunker as a deflector. This facility is similar to the

static test facilities at Biysk 1/, Perm 2/, Sterlitimak 3/, and Krasnoyarsk 4/; however, it does not have the H-shaped building observed at three of these sites.
